Education

Rajiv Gandhi University of Knowledge Technologies, Nuzvid IIIT — **2023 – 2025**
Pre-University Course (PUC), ***CGPA - 9.82*** — *Completed*

Rajiv Gandhi University of Knowledge Technologies, Nuzvid IIIT — **July 2025 – May 2029**
B.Tech in Artificial Intelligence and Machine Learning, ***CGPA - 9.1*** — *Currently in 2nd Year*

Experience

ICRA 2026 — ArXiv GitHub
GOOSE 2D Fine-Grained Semantic Segmentation Challenge — March 2026 - May 2026

- Developed **GOOSE-M2F**, a long-tail-aware Mask2Former framework integrating attention-based feature refinement, rare-class supervision, and imbalance-aware optimization for fine-grained semantic segmentation in unstructured outdoor environments.

ECCV 2026 — GitHub
MoCha2026 - Benchmark and Challenge on Parkinsonian Gait — May 2026 - August 2026

- Worked on cross-site Parkinsonian gait severity prediction pipeline integrating **BiGRU/MoMask** motion embeddings, biomechanical feature engineering, adversarial feature selection, and calibrated ensemble learning

MICCAI - Deep-Breath 2026 — GitHub
Universal UltraSound Image and Video Analysis Challenge 2026 — June 2026 - August 2026

- Developed a unified multi-branch deep learning framework integrating **EfficientNet-B5**–**UNet++** segmentation, temporal CEUS perfusion modeling, and morphological refinement for multi-organ ultrasound segmentation and diagnostic classification.

WACV 2027 — GitHub
RWS2027 - UPAR Challenge Track 2: Attribute-based Person Retrieval — September 2026 - October 2026

- Developed a **cross-domain person retrieval** framework combining visual representations, attribute-aware learning, domain-shift calibration, and cascaded reranking for fine-grained surveillance retrieval.

Achievements

- **3rd Place – ICRA 2026** *GOOSE 2D Fine-Grained Semantic Segmentation Challenge*, attaining 70.08% official composite mIoU with GOOSE-M2F.
- **16th Place – ECCV 2026** *MoCha Challenge*, for cross-site Parkinsonian gait severity prediction using fused BiGRU/MoMask motion representations and biomechanical features.
- **18th Place – Deep-Breath 2026 at MICCAI** *UUSIVC Challenge*, for multi-organ ultrasound segmentation and diagnostic classification across B-mode, CEUS, and video modalities.
- **33rd Place among 695 Submissions – WACV 2027** *UPAR Challenge*, for cross-domain attribute-based person retrieval across real-world surveillance datasets.
- **MacBook Pro Award – Build for Good Hackathon 2026**, recognized among the **Top 34 teams out of 3,000+ nationwide** for developing Satyamev-Bot, a multimodal AI fact-checking system.
- **Top 10 Finalist – Megathon 2026, IIIT Hyderabad**, for developing an Android-based multilingual AI application integrating Bhashini AI for Machine Translation, ASR, TTS & OCR.

Technical Skills

- **Programming:** Python, Java, C
- **Technologies:** Computer Vision, Deep Learning, Machine Learning, AI Engineering, LLMs, VLMs
- **Frameworks:** PyTorch, Tensorflow, OpenCV, Hugging Face Ecosystem, CUDA, timm
- **Tools:** VS Code, Git, Kaggle, Colab, Tensorboard, Wandb

Research Interests

Computer Vision, Robust Deep Learning, Medical Image Analysis

Additional Information

- **Languages:** English, Hindi, Telugu
